INTRODUCTION

Each landform on Earth has habitats for certain plants and animals, or flora and fauna. Some locations share similar life-forms, while others, like Australia, have unique species of plants and animals.

There are millions of different plants and animals living on the planet. Over 20,000 are native to the United States!

As the characters and events began coming to life in the story of FEETSPEAK, since it was a Realistic Fiction tale, I wanted the Settings to be realistic, too.

So, I did extensive research on the several specific geographical locations in the United States where the story and its backstories take place, such as:

- the Midwest's wildflowers, animals, pond life, and farming community
 - the wildlife of the Blue Ridge Mountains
 - a city park & county fair's animals

If and/or when you visit one of these areas, you will be familiar with some of their specific flora and fauna, or plants and animals.

CONSTRUCTION INSTRUCTIONS

MATERIALS NEEDED: card-stock, printing paper, page inserts (color, imaged, decorative), binding (heavy tape, staples, coil/comb, hole-punch/brads), scissors, large & small paper clips, glue stick, pencil, colors, copy of FEETSPEAK
SEQUENCE: You're going to compile a Nature Views Booklet, so, print the Front/Back Covers on card-stock.

Print the Storage Pocket on card-stock. Fold in half, crease & bind the 2 open, parallel together with wide, heavy tape and/or staples.

Print the Category Labels on card-stock. Cut out, clip together, and place in Storage Pocket.

Copy the Settings & Photos pages on paper. Cut them out & clip them together in groups. Place them in the Storage Pocket.

Double-side copy the Answer Sheets. Fold and, then, place them in the Storage Pocket.

When you have completed the Page Inserts, organize them by chapters, make a Table of Contents, insert them between the Booklet Covers, and bind.

ACTIVITY PLAN

Once you have cut out, organized & placed the Labels, Setting Strips & Photos in the Storage Pocket, gather 13 sheets of paper for your Nature Views Booklet Page Inserts. They can be white, colored and/or decorative. You can, also, use Image Settings you have found and printed.

Make your Table of Contents Page, listing the Page Inserts by Chapter Numbers. Glue a Chapter Setting Strip to each of the remaining 12 pages. Choose a Setting Chapter page you want to illustrate & glue the Photo Images onto it. Use the FEETSPEAK book to help you. Then, check your selections with the Chapter-by-Chapter Answer Sheet for accuracy.

Continue working each page until you have completed each Chapter and used all the Photo Images.

Instead of gluing down the Photo Images on the Chapter Setting Pages, you may want to draw and hand-write the Labels within the illustration (see Sample Chapter 7 Page Insert w/ Drawings).

When you have completed the 12 Chapter-Setting Page Inserts, put them in order, and bind them together in your Nature Views Booklet.

HOW TO USE

Lay out the Category Labels in a column or row. Place the Nature View Photo beside or underneath each heading.

Then, check your choices with the Answer Sheet. Clip them together as your reference to use when creating your

Chapter Setting illustration pages for your Nature Views Booklet. You may, also, want to add other plants & animals as you re-read the chapters in FEETSPEAK. Use the web or a

Nature book to help you.
